INSTALLATION AND SETUP GUIDE

CARPOOLING WEB APPLICATION

SOFTWARE ENGINEERING PROJECT

DEVELOPERS:

HASAN ABBAS (2014-10-0059)

MUHAMMAD WAJAHAT (2014-10-0128)

LUQMAN GHANI (2014-10-0180)

USMAN ZAHEER (2014-10-0222)

COURSE INSTRUCTOR:

HAMID ABDUL BASIT

COURSE HELP STAFF:

SHAMSA ABID

GitHub URL:

https://github.com/LuqmanSahaf/SE_Project.git

Hardware Requirements:

A web server with a decent bandwidth.

Software Requirements:

- Oracle SQL 11g
- PHP version 5.3 or later
- Apache version 2.2 or later
- Javascript enabled
- Use Chrome or Firefox for best performance

Step by Step installation:

1. Place all the files in the source code folder of project into the root directory of the webserver
2. Change the listening port in db.php to the port at which the oracle server's TNS listener is listening
3. Use the SE.sql file to create the three sequences at the end of file and then create the necessary tables
4. Insert the data of users in the USERS table, you can also use the insert commands written in the SE.sql file
5. Insert the dummy data in lift or use the web interface
6. You are good to go.
